

June 15, 2012

I have been living in Tuscany Hill for several years now. Prior to moving here I was always proud of having a nice green lawn. However, I soon discovered that due to the intense dry heat and soil here it became very challenging keeping my lawn healthy at all. I tried many products and systems which I was told would help my lawn grow stronger and have a rich green color. As hard as I tried one way or another I would always lose the lawn battle.

One of the hardest battles to deal with were the Rodents! Particularly Rabbits! For years I tried every remedy possible to keep the Rabbits from desiring my lawn ie fencing, traps, blood meal fertilizer odor control etc. Nothing would work and eventually I ended up having to replace my grass more than once!

I was referred to Soil technologies by a friend. Shortly after having the system installed, I was completely amazed at how soon my rodent problem went away! And amazingly with almost little to no effort on my part! My lawn has now stayed more healthy and green than I ever thought possible! The cost of this installation and product has far outweighed the labor, stress and huge expense I endured while using the common products and advise I received from the different garden stores.

Thank you Soil Technology for making my life so much easier! And while not harming any rodents or rabbits in the process! I only wish I heard about your service 20 years ago!
